

Execution of Deluge Functions in Zoho Creator

Aim

To create and execute 10 Deluge functions in Zoho Creator for performing various operations in the Student Management System and to verify their outputs.

Procedure

1. Open the Student Management System application in Zoho Creator.
2. Navigate to Workflows → Functions.
3. Click New Function.
4. Enter the required Function Name.
5. Select the appropriate Return Type.
6. Add the required Arguments with their data types.
7. Click Create to open the Deluge editor.
8. Enter the required Deluge script.
9. Click Save to save the function.
10. Click Execute and provide the required input values.
11. Click Submit/Execute and observe the output.
12. Verify that the obtained output is correct.

The screenshot displays the Zoho Creator Deluge editor interface. The top bar shows the project name "Student Management Systems" and the function name "ValidateStudentEmail". The left sidebar contains a "Deluge" tab and a list of function categories: Condition, Data Access, and Miscellaneous. The main editor area shows a JavaScript-like code snippet for validating an email address. The code checks if the email contains "@" and "." characters. If both are present, it returns "Valid Email Address"; otherwise, it returns "Invalid Email Address".

```
1 string ValidateStudentEmail(string email)
2 {
3     if(email.contains("@") && email.contains("."))
4     {
5         return "Valid Email Address";
6     }
7     else
8     {
9         return "Invalid Email Address";
10    }
11 }
```

Below the editor, there is a toolbar with "Save" and "Execute" buttons. The bottom status bar indicates a trial period of 15 days and provides links for "Upgrade", "Get started faster", and "Help".

The "Execute" window is open, showing the results of the function execution. It has a title bar with a close button. The window contains two sections: "Result:" and "Return value:". The "Result:" section shows a green checkmark and the text "Executed Successfully". The "Return value:" section shows the text "Valid Email Address" and a copy icon. At the bottom of the window are two buttons: "Execute Again" and "Close".

Result:

Thus, the Deluge functions were successfully created, executed, and verified in Zoho Creator .
