ASSIGNMENT 5 **MANISHA M**
240701304

Insurance Claim Automation Suite Using Zoho Creator Workflows

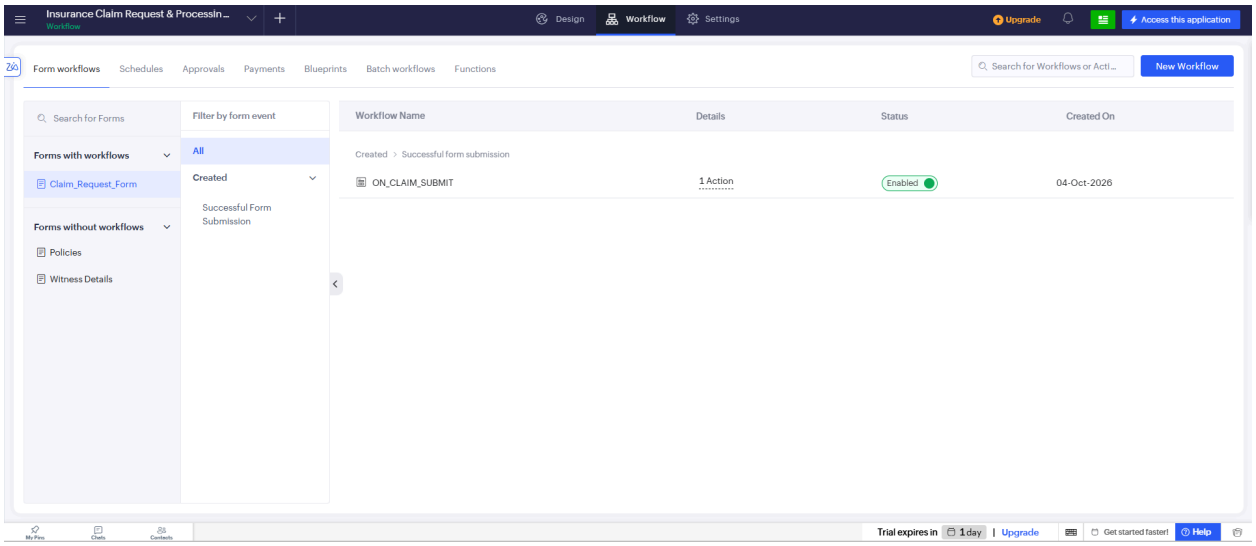

Aim

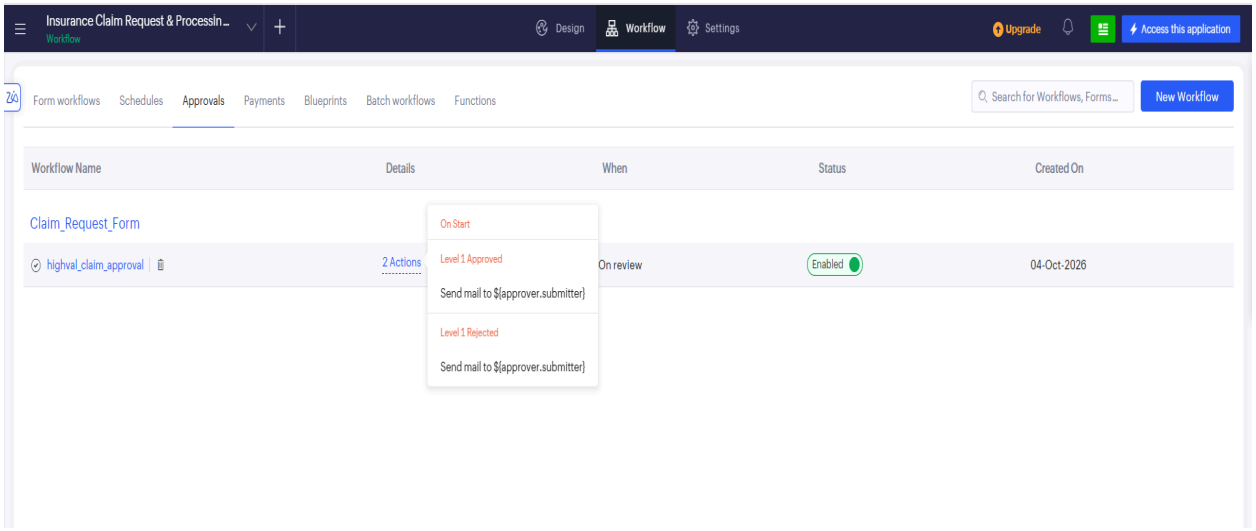

To design and implement an Insurance Claim Automation Suite in Zoho Creator using all eight workflow options—Form Workflows, Schedules, Approvals, Payments, Blueprints, Batch Workflows, Report Workflows, and Functions—to automate the insurance claim lifecycle from submission to settlement.

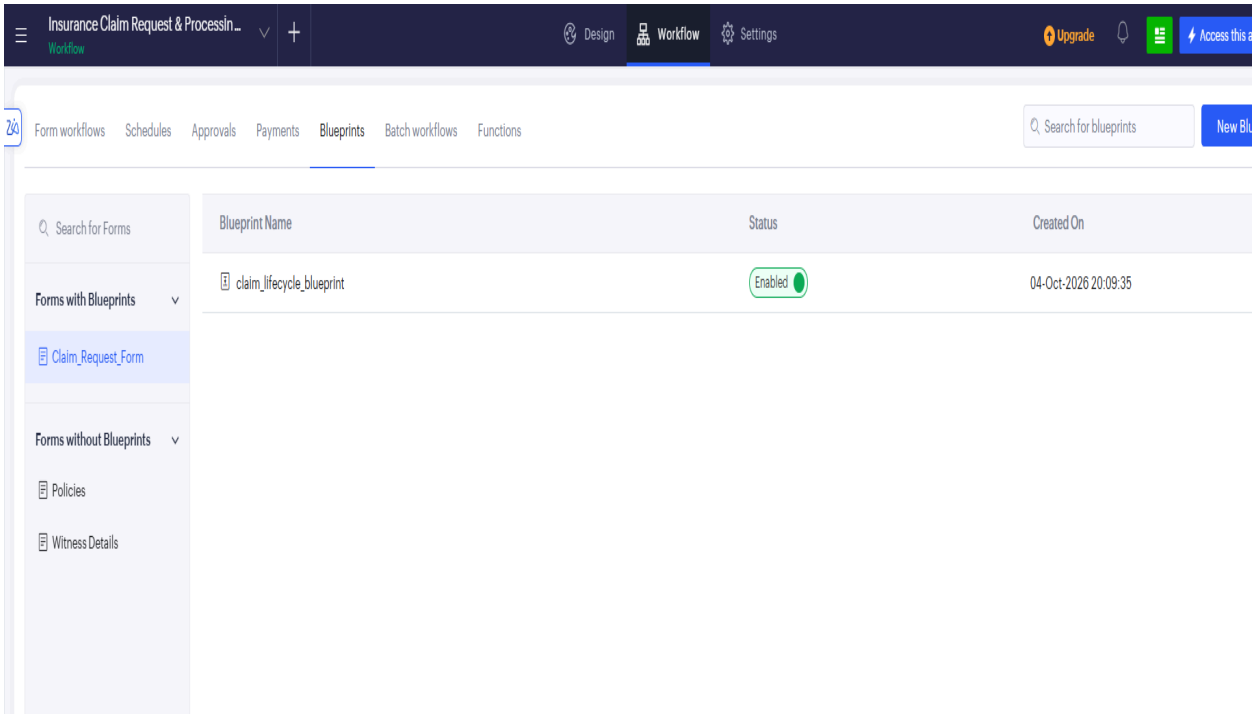

Procedure

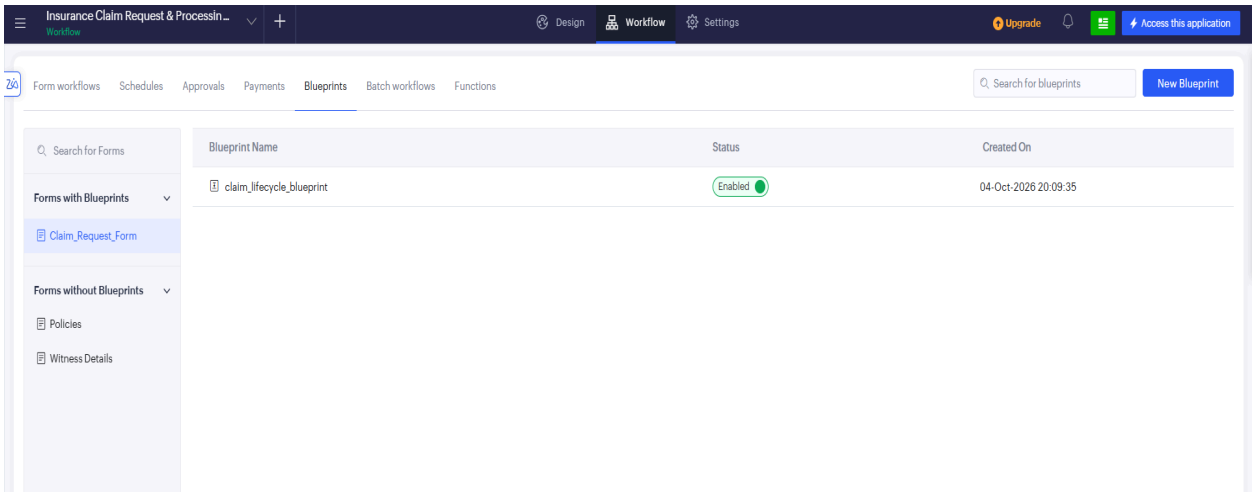

1. Open the existing Insurance Claim Request & Processing Management application in Zoho Creator.
2. Create a Form Workflow named `On_Claim_Submit_Workflow` to send an acknowledgement email when a new claim is submitted.
3. Create a Schedule named `Daily_Missing_Document_Reminder_Schedule` to send daily reminders for claims with missing documents.
4. Create an Approval named `HighValue_Claim_Approval` to route high-value claims to the Senior Claims Manager.
5. Configure the Payment workflow `Claim_Settlement_Payout_Workflow` to initiate the settlement payout after claim approval.
6. Create a Blueprint named `Claim_Lifecycle_Blueprint` with the stages: Submitted → Document Verification → Investigation → Approved → Settled/Rejected.
7. Create a Batch Workflow named `Bulk_Surveyor_Reconciliation_Batch` to process and reconcile claims against surveyor reports in batches.
8. Create a Report Workflow named `OnEdit_Recalculate_Settlement_Workflow` to recalculate the Net Payable Amount when the repair cost or depreciation percentage is modified.
9. Create a reusable Deluge Function named `Generate_Settlement_Letter_Function` to generate and send the settlement letter to the claimant.
10. Configure appropriate permissions, approval roles, reminder limits, batch size, and validation rules for the workflows.

Result

Thus, the **Insurance Claim Automation Suite** was successfully implemented in Zoho Creator using all eight workflow options. The claim lifecycle was automated from claim submission through document verification, investigation, approval, settlement payout, and generation of the settlement letter with controlled and auditable processing.
