ASSIGNMENT 1 **MANISHA M**

240701304

4) Insurance Claim Request Form — Basic Fields Use Case

Aim

To design and develop a functional **Insurance Claim Request & Processing Management** application using **Zoho Creator**, by creating an online insurance claim request form using all **thirteen Basic Fields**, applying appropriate field validations, and generating a report to store and manage submitted claim requests.

Procedure

1. Open **Zoho Creator** and sign in to the account.
2. Create a new **Blank Application** and enter the application name as **Insurance Claim Request & Processing Management**.
3. Create a new blank form and name it **Claim_Request_Form**.
4. Open the form in the **Form Builder** and create four sections:
    1. **Section A – Claimant Details**
    2. **Section B – Contact Details**
    3. **Section C – Claim Details**
    4. **Section D – Scheduling & Declaration**
5. In **Section A – Claimant Details**, add the following fields:

    1. **Name** field for `Claimant_Name`
    2. **Radio** field for `Claimant_Type`
    3. **Single Line** field for `Policy_Number`

6. In **Section B – Contact Details**, add:

    1. **Email** field for `Email_Address`
    2. **Phone** field for `Contact_Number`
    3. **Address** field for `Residential_Address`

7. In **Section C – Claim Details**, add:

    1. **Drop Down** field for `Claim_Type`
    2. **Date** field for `Date_Of_Incident`
    3. **Number** field for `Claim_Amount_Requested`
    4. **Multi Select** field for `Supporting_Documents_Available`
    5. **Multi Line** field for `Incident_Description`

8. In **Section D – Scheduling & Declaration**, add:

    1. **Time** field for `Preferred_Callback_Time`
    2. **Checkbox** field for `Declaration_Of_Authenticity`

9. Configure the options for the **Claim Type** field as:

    1. Motor Insurance
    2. Health Insurance
    3. Life Insurance
    4. Property Insurance
    5. Travel Insurance

10. Configure the **Claimant Type** radio options as:

    1. Policyholder
    2. Nominee
    3. Third Party

11. Configure the **Supporting Documents Available** multi-select options such as:

    1. Photographs
    2. Police FIR Copy
    3. Repair Estimate
    4. Medical Documents
    5. Policy Copy
    6. Identity Proof

12. Configure the required fields. Make the following fields mandatory:

    1. Claimant Name
    2. Claimant Type
    3. Policy Number
    4. Contact Number
    5. Claim Type
    6. Date of Incident
    7. Claim Amount Requested
    8. Declaration of Authenticity

13. Configure field validations. Enable email format validation, phone number validation, positive-value validation for the claim amount, and restrict the incident date from accepting future dates.
14. Configure the **Declaration of Authenticity** checkbox as mandatory so that the form cannot be submitted without accepting the declaration.
15. Open the **Preview** option and verify the layout, sections, fields, field options, and validations of the form.
16. Create a report named **Claim_Request_Report** to store the submitted claim requests.
17. Enter and submit sample claim records containing different claimant details, policy numbers, claim types, incident dates, claim amounts, and supporting documents.
18. Verify that the submitted records are successfully displayed in the **Claim_Request_Report**.
19. Review the report and verify that the claims can be viewed and filtered based on information such as **Claim Type** and **Claim Amount Requested**.
20. Verify the complete workflow from entering the claim details in the form to storing the submitted information in the report.

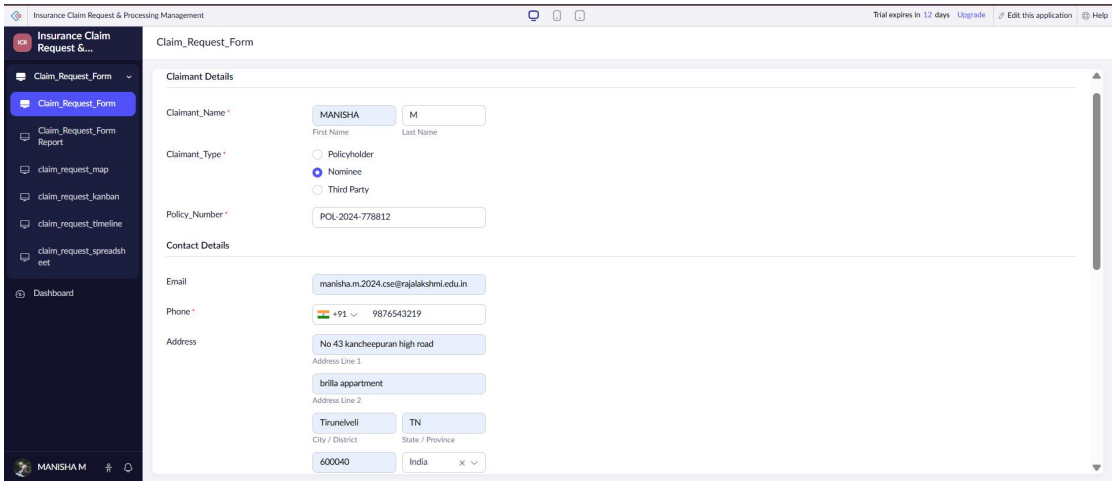

OUTPUT:

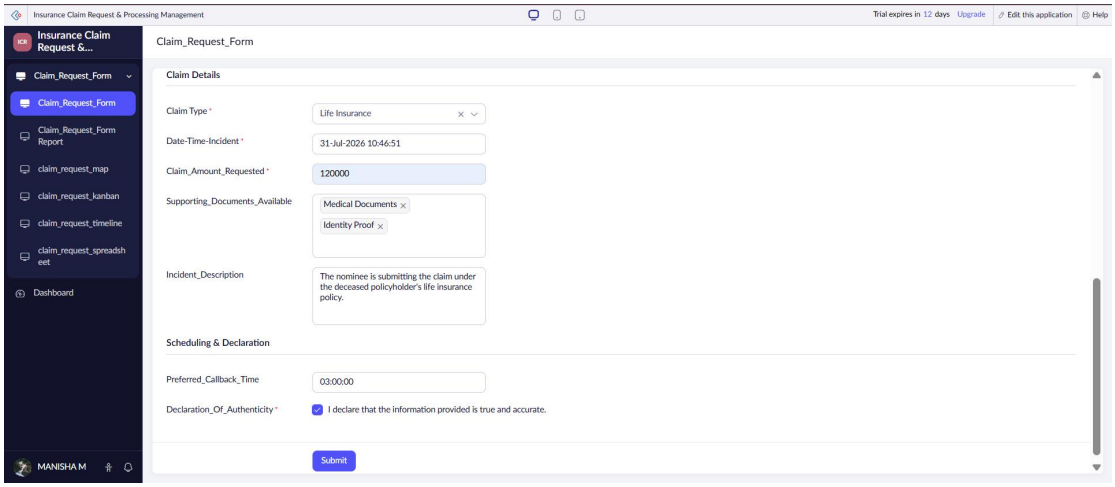

1: Form Builder with all 13 fields

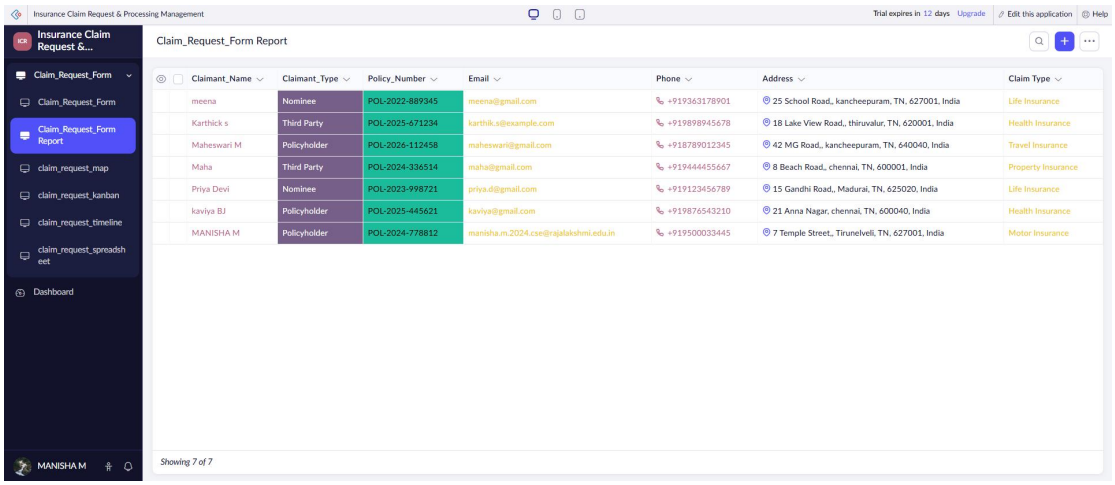

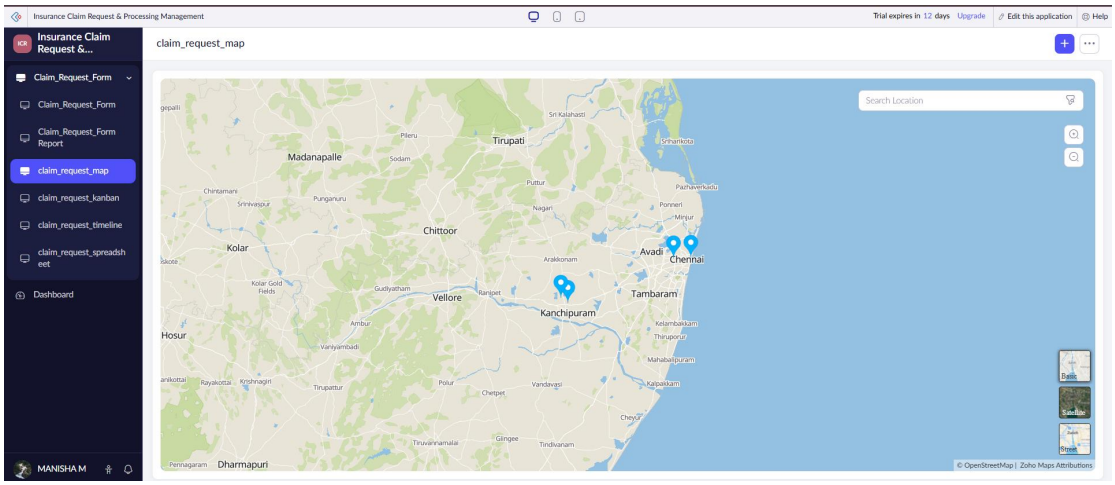

2: Live Preview of the form

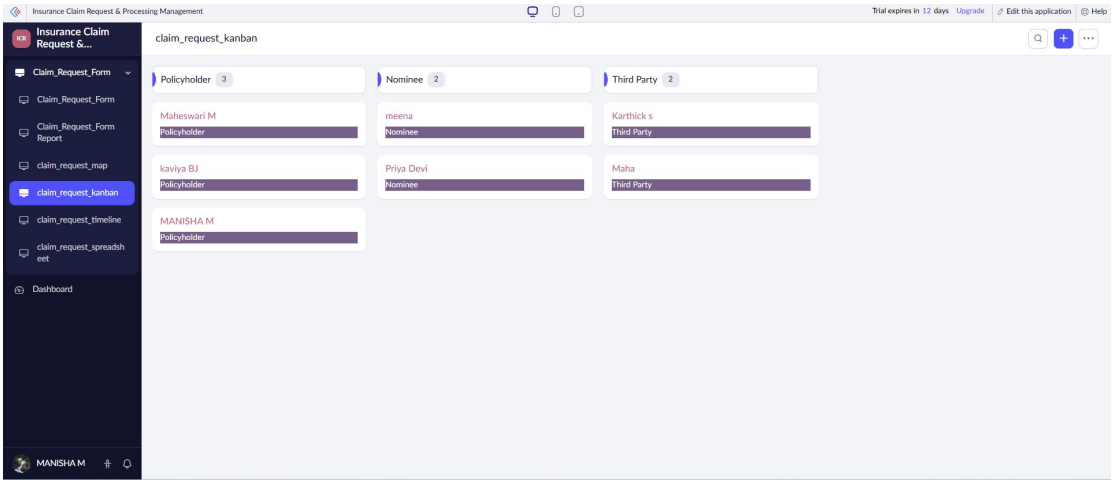

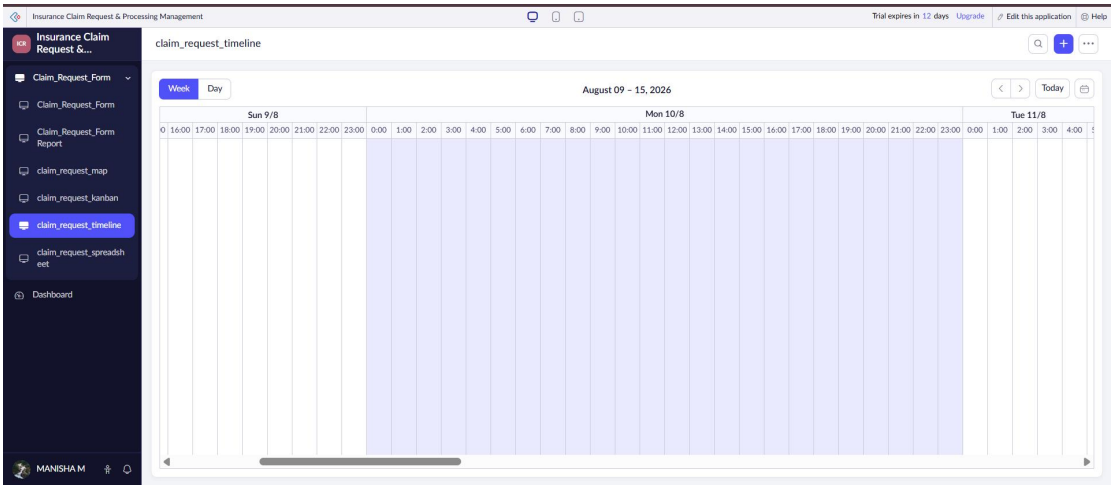

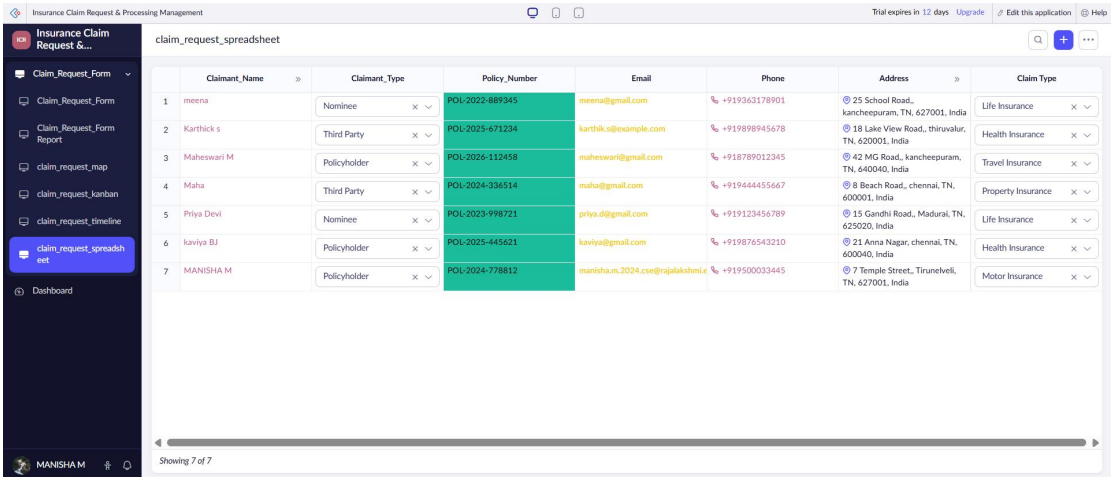

3: Claim_Request_Report showing 5+ sample records

Result

The **Insurance Claim Request & Processing Management** application was successfully created in **Zoho Creator**. The `Claim_Request_Form` was designed using all **thirteen Basic Fields** and organized into four sections: Claimant Details, Contact Details, Claim Details, and Scheduling & Declaration. The required field validations were configured, sample insurance claim requests were submitted successfully, and the submitted records were stored in the `Claim_Request_Report` for viewing and further claim processing.
